

1.1 INTRODUCTION TO MAPS NOTES - PART I

1.1 Identify types of maps, the types of information presented in maps, and different kinds of spatial patterns and relationships portrayed in maps.

1.1.1 TYPES OF MAPS

1. Reference Maps:
- a.

b.

c.

2. Thematic Maps:

Type of Map	Explanation	Draw or Paste an Example

1.1 INTRODUCTION TO MAPS NOTES - PART II

1.1 Identify types of maps, the types of information presented in maps, and different kinds of spatial patterns and relationships portrayed in maps.

1.1.2 TYPES OF SPATIAL PATTERNS ON MAPS

LOCATION	DISTANCE
1. Absolute Location	3. Absolute Distance
2. Relative Location	4. Relative Distance
DIRECTION	PATTERN
5. Absolute Direction	7. Clustering
6. Relative Direction	8. Dispersal/Distribution
	9. Patterns & Spatial Associations

1.1 INTRODUCTION TO MAPS NOTES - PART III

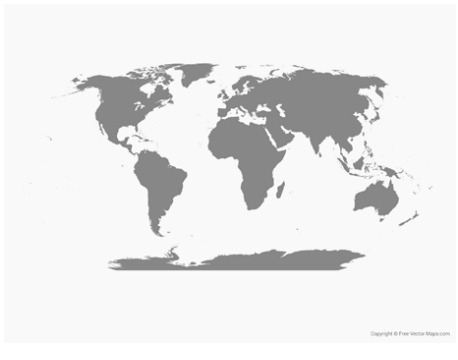

1.1 Identify types of maps, the types of information presented in maps, and different kinds of spatial patterns and relationships portrayed in maps.

1.1.3 MAP PROJECTIONS & DISTORTIONS

- Map projections _____ in shape, area, distance and direction.
- Map Projection:
- Maps are _____ in what they portray - different projections are used for different _____.
- Map projections are...S.A.D.D, because they distort
 -
 -
 -
 -

MERCATOR (1569)		
ADVANTAGES	DISADVANTAGES	

PETERS EQUAL AREA		Illustrate the REAL size of Africa compared to Greenland here.
ADVANTAGES	DISADVANTAGES	

ROBINSON		
ADVANTAGES	DISADVANTAGES	

Ultimately, what is the point?

1.2 & 1.3 GEOGRAPHIC DATA

1.2 Identify different methods of geographic data collection.

1.3 Explain the geographic effects of decisions made using geographical information.

Identify different methods of geographic data collection.

1. How is data gathered?

a. Fieldwork/Field Observations:

i. Examples:

ii. Another Example - The US Census

1. What is the point?

b. Geospatial Technologies

i.

ii.

iii.

iv.

v. Geospatial technologies are utilized by...

	EXPLANATION	EXAMPLE
GIS		
GPS		
Remote Sensing		

1.4 SPATIAL CONCEPTS

1.4 Define major geographic concepts that illustrate spatial relationships.

The Spatial Perspective

- 1.
- 2.
- 3.
- 4.
- 5.

The image shows a worksheet titled "AP Human Geography Thinking Like a Geographer". It includes a header with "Name: _____" and "Set ____ pg# ____". Below the title is a "Type of Source" section with checkboxes for "map", "graph", "data", and "document". The worksheet is divided into four main sections, each with a title and a list of prompts:

- Step I: What & Where?**
 - what - where - when - scale - purpose
- Step II: Patterns**
 - patterns - similarities - differences - grouping
- Step III: Why There?**
 - why is that pattern there? - how did it get there? - why does the pattern exist?
- Step IV: Why Care?**
 - impact - implications - EPH

How do we describe what a location is like?

1. _____
 - a. _____: Factors that contribute to the _____
 _____.
 i. Example: _____
 - b. _____: _____ that
 humans created which make up the _____.
 i. Example: _____
 - c. _____: A location _____ a _____.
 No _____.
 i. Example: _____

How do we describe where a place is located?

1. _____
 - a. Absolute v. Relative

b. _____ -> _____ - usually reflective of the _____ & _____ of a place.

i. Example: _____

c. _____: _____ of a location; includes _____.

Climate

- Tropical latitudes are near the _____. The climate is typically _____ because those locations get _____.
- High latitudes receive _____ sunlight, so these places are _____ year round.
- _____ also impacts climate as well.
 - a. _____ = colder climate.
 - b. _____ = warmer climate.

Patterns - Spatial Analysis

1. Clustering:
2. Dispersal/Distribution:
3. Patterns & Spatial Associations: Indication that two (or more) phenomena may be _____, _____ with one another. _____.
4. _____: The process geographers use to _____ space into _____.

Why there? Why care? Spatial Interactions

1. Spatial Interaction: _____.

Name:

[Unit 1: Thinking Geographically]

pg#

WHAT GEOGRAPHIC CONCEPTS DO WE USE TO EXPLAIN THE CONNECTEDNESS (OR LACK THEREOF) OF PLACES/LOCATIONS/PHENOMENON?

A.	B.
- The _____ between two places _____ as the _____ between the two places _____. - Examples:	- The increasing sense of _____ and _____ which seems to bring humans in _____ places _____. - Due to:
C. _____: the process by which a characteristic _____ across space from _____ to another. Examples include: _____	

Sample Spatial Analysis - China

Follow along with your teacher and take notes on the spatial analysis of population and air pollution in China.

WHAT	
WHERE	
PATTERNS	
WHY THERE	
WHY CARE	

Name:

[Unit 1: Thinking Geographically]

pg#

1.5 HUMAN-ENVIRONMENTAL INTERACTION

1.5 Explain how major geographic concepts illustrate spatial relationships.

1. Cultural Ecology: _____

2. Environmental Determinism: _____

a. How was environmental determinism used to justify racism?

b. Explain one example of how environmental determinism is accurate.

3. Possibilism: _____

a. Describe how the following examples illustrate the concept of possibilism.

Palm Islands, Dubai

Name:

[Unit 1: Thinking Geographically]

pg#

1.6 SCALE OF ANALYSIS

1.6 Define scales of analysis used by geographers & Explain what scales of analysis reveal.

_____ in and out to _____.

Small Scale Maps:

Large Scale Maps:

Label the map scales below and summarize the analysis.

Map: Share of the Population Living in Extreme Poverty

Scale:

What conclusions can be drawn from this map?

Map: Percentage of People in Poverty for the United States and Puerto Rico: 2018

Scale:

What conclusions can be drawn from this map?

****Different _____ reveal _____ in spatial patterns.****
How do the two maps show different (and sometimes inaccurate) conclusions?

Map: County Poverty Rate for the United States: 2013-2017

Scale:

What conclusions can be drawn from this map THAT ARE DIFFERENT FROM THE PREVIOUS MAP(s)?

Maps: Highest & Lowest Median Household Incomes in Cincinnati

Scale: _____: smallest scale of analysis - comprise about _____ people.

What conclusions can we draw about Cincinnati on this map that we were UNABLE to conclude from the other maps?

Graph: Maternal Mortality in Ethiopia and sub-Saharan Africa

Scale:

What conclusions can be drawn from this graph?

Name: _____

[Unit 1: Thinking Geographically]

pg# _____

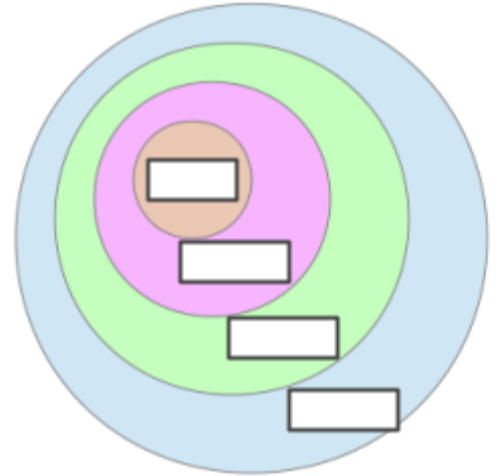

1.7 SCALE OF ANALYSIS

1.7 Describe different ways that geographers define regions.

Geographers apply regional analysis at _____

Regions are defined as an area with _____ or more
_____ or _____ of activity.

- 1.
- 2.
- 3.

1. A formal region is _____

Description & Examples	
ECONOMIC	
SOCIAL	
POLITICAL	
ENVIRONMENTAL	

2. A functional region is _____ and the relationship is
typically based around _____, _____, _____.

a. Examples: _____

Name: _____

[Unit 1: Thinking Geographically]

pg# _____

3. A perceptual/vernacular region is based on a person's _____ or _____ of a certain location.

a. _____

b. _____

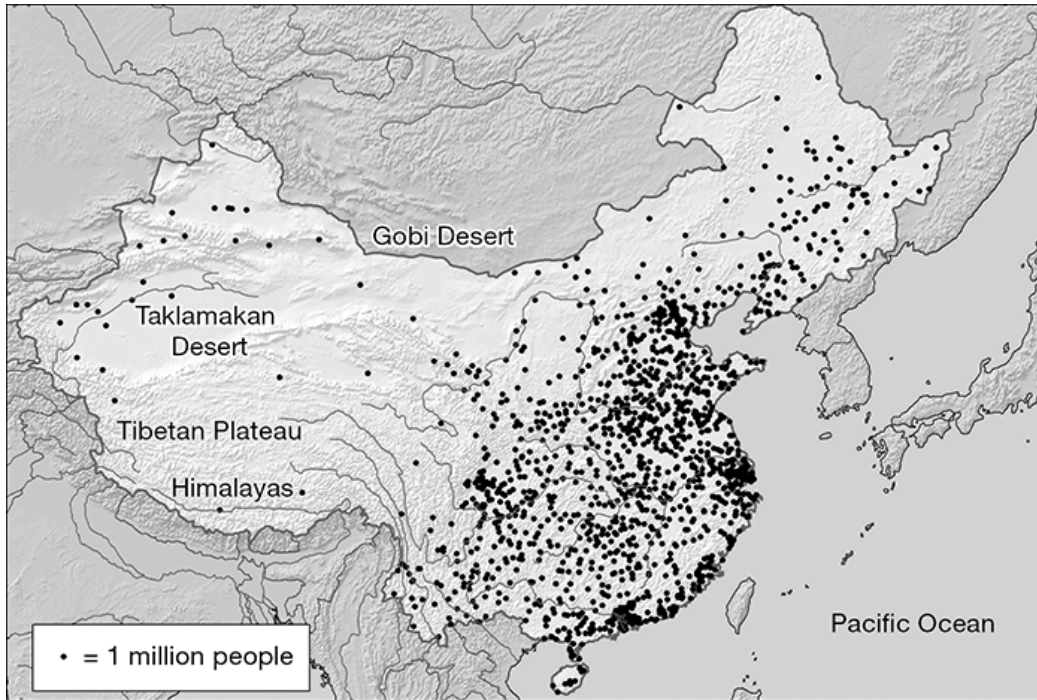

c. Boundaries often _____ because people have a different sense of what _____.

d. Examples: _____

*Regional boundaries are often _____

Unit 1 FRQ

The map shows the major rivers, mountain ranges, desert regions, and population densities in China. Mapping the distribution of a population is a geographer's first step to understanding where people settle and why some areas have greater population densities than other areas.

Prompt:

- A. **Identify** what each point symbol on the map represents.
- B. **Identify** TWO topographic features shown on the map.
- C. **Describe** TWO ways that topography affects the spatial pattern of population distribution shown on the map.
- D. **Describe** ONE way that the availability of natural resources may affect population distribution.

Please respond in at least 4 sentences
